

FTICKS for NPS

This is untested.

```
<Output syslog_tls>
  Module      om_ssl
  Host        212.219.243.132
  Port        6514
  CAFile      c:/Program Files (x86)/nxlog/data/cacert.pem
  CertFile    c:/Program Files (x86)/nxlog/data/clientreq.pem
  CertKeyFile c:/Program Files (x86)/nxlog/data/clientkey.pem
  AllowUntrusted 1
  OutputType  Syslog_TLS
  Exec        to_syslog_ietf();
</Output>

<Output syslog_tcp>
  Module      om_tcp
  Host        212.219.243.132
  Port        601
  OutputType  Syslog_TLS
  Exec        to_syslog_ietf();
</Output>

<Input eventlog>
  Module im_msvistalog
  <QueryXML>
    <QueryList>
      <Query Id="0" Path="System">
        <Select Path="System">*[System[Provider[@Name='NPS']]]</Select>
        <Select Path="Security">*[System[Provider[@Name='Microsoft-
Windows-Security-Auditing']] and Task = 12552]]</Select>
      </Query>
    </QueryList>
  </QueryXML>
</Input>

<Route 1>
  Path      eventlog => syslog_tcp
</Route>
```

The first stanza, `syslog_tls`, is just there for information. It's not actually used in this configuration. At a later date we'll be looking at encryption but there's a PKI to build.

This is all fairly self-explanatory. **OutputType Syslog_TLS** is needed to enforce the RFC5424 standards along with **Exec to_syslog_ietf()**. Not sure why both are needed but they really are.

In the Eventlog config the QueryXML is extracted from Windows Event Log (**Event Viewer** → **Custom View** → ***Server Roles. Right click on Network Policy.... Choose Properties****, Edit Filter, XML and

copy the XML into the NXLog config).
