2025/11/01 14:18 1/2 Adding Operator-Name

## **Adding Operator-Name**

Cisco ISE doesn't insert O-N into the Request by default. O-N helps Home sites identify where their users' authentications are coming from. Combined with Chargeable User Identity, Home and Visited sites can provide and follow an audit trail back to a user without the Visited site knowing the users' details.

## Adding the Operator-Name attribute

- Go to Policy → Policy Elements → Dictionaries.
- Open up the **System** dropdown.
- Open up the Radius dropdown.
- Click on IETF.
- Click on unknown-126 and enter
  - Attribute Name as 'Operator-Name'
  - Data Type as STRING
  - Direction as IN
- Click Save

## **Modify the Request packet**

- Go to Administration → Network Resources → RADIUS Server Sequences.
- Click on which-ever server sequence relates to the Jisc NRPS.
- Click on Advanced Attribute Settings
- Enable Modify Attribute in the request
- Choose **Add Radius:Operator-Name** 1*realm* (where *realm* is your primary realm e.g. 1holby.local)
- Click Save
