2025/09/16 15:24 1/1 Adding Operator-Name

## **Adding Operator-Name**

Cisco ISE doesn't insert O-N into the Request by default. O-N helps Home sites identify where their users' authentications are coming from. Combined with Chargeable User Identity, Home and Visited sites can provide and follow an audit trail back to a user without the Visited site knowing the users' details.

## Adding the Operator-Name attribute

- Go to Policy → Policy Elements → Dictionaries.
- Open up the **System** dropdown.
- Open up the **Radius** dropdown.
- Click on RADIUS Vendors.
- In the RADIUS Vendors Panel click Add and enter
  - Dictionary Name as 'Govroam'
  - Vendor ID as '99999'
- Click on Govroam, then Dictionary Attributes
- Click Add
- Enter:
  - Attribute Name as 'Operator-Name'
  - Data Type as STRING
  - ID as '164'

## Modify the Request packet

- Go to Administration → Network Resources → RADIUS Server Sequences.
- Click on which-ever server sequence relates to the Jisc NRPS.
- Click on Advanced Attribute Settings
- Enable Modify Attribute in the request
- Choose **Add Govroam:Operator-Name** 1realm (where realm is your primary realm)
- Click Save
